

# Tips for Winter Garbage Pickup

- Make sure the containers are not blocked by snow.
  - If snow is blocking the container, the driver will not be able to service the container.
- Make sure the area leading up to the container is salted.
  - If the ground is icy, the truck will not be able to service the container.
- Make sure lids are closed to prevent trash from freezing.
  - This will prevent snow or rain from getting into the container and freezing the items.
- Salt the inside of the container.
  - This will help prevent ice from forming and it will also help melt ice that has formed.
- Do not pack items in the container.
  - Items need to be able to move freely in the container. This is more important in the winter since items will freeze.
