

We are closely monitoring the [forecasted track of Hurricane Dorian](#) and the potential to have an impact in the areas we service. The safety of our employees, our customers, and our communities is paramount. Here's some important information to prepare for the possible landfall of Tropical Storm Dorian:

- Be sure to secure solid waste materials by placing them in a location away from high winds. This includes garbage or recycling containers, as well as uncollected garbage, recycling, yard waste, or bulk waste.
- Service may be suspended before and/or after a storm. For the safety of our team members and the communities we serve, collection will not resume until it is designated as safe by the proper authorities.

If you are in an area directly impacted by the storm:

- Defer to information provided by your municipality regarding solid waste collection and post-storm collection efforts.
- As you prepare items for post-storm collection efforts, it's **essential** to keep your normal household waste separated from storm debris. If possible, storm debris should be placed in a pile curbside for collection teams to easily access.
- Advanced Disposal will resume collection of your normal services once local authorities advise that roads are passable and safe for our trucks.

We encourage you to like our Facebook page and check often for the most up-to-date information: www.Facebook.com/AdvancedDisposal.

Additional tips and information can be found at www.ready.gov/hurricanes or your municipality's website for local information. For the most up-to-date information on storm activity, visit www.nhc.noaa.gov.
